

Deepak Khimavath

AI Platform Engineer | Developer Tools | Agentic Systems

Bengaluru, India | +91 7204209095 | deepakkhimavath@gmail.com | [linkedin.com/in/deepak-khimavath-338074219](https://www.linkedin.com/in/deepak-khimavath-338074219) | github.com/DeepakkhimavathBB

SUMMARY

AI platform and developer tools engineer building production AI systems, internal developer tooling, and event-driven financial infrastructure. Built a production Azure DevOps PR review agent, a Visual Studio AI development companion used by 20+ engineering/product users, and an active R&D 6-agent code intelligence pipeline. Owns 3 production financial microservices in a 50+ service EDA platform; delivered a 98% latency reduction by modernizing SP-driven processing toward event-driven service flows.

CORE SKILLS

AI / Agents: LLM infrastructure, agentic workflows, multi-agent orchestration, RAG, Qdrant, LlamaIndex, LangFuse, prompt evaluation, tool calling, code intelligence

Backend / Platform: C#.NET, Python, FastAPI, Azure Functions, Azure DevOps REST API, microservices, EDA, message queues, idempotency, retry-safe workflows

Infra / Tooling: MS SQL Server, Dapper DAL, Azure Event Grid, App Service, Storage, Monitor/Logs, CI/CD, OAuth/JWT, MSAL.NET, WebView2, VSIX, WPF, VSCT

EXPERIENCE

Eton Solutions - Trainee Engineer

Jul 2025 - Present | *Wealth management / FinTech platform*

- Own 3 production financial microservices end-to-end: **EliminationService**, **DFRulesProcessorService**, and **JournalEntryPersistService**, covering trade elimination, rules evaluation, and ledger persistence workflows.
- Reduced a critical event-driven processing bottleneck from **15-20 hours to under 15 minutes** across a 50+ service distributed architecture by modernizing SP-driven financial processing into queue-backed service flows.
- Built transaction-processing workflows spanning bank feed ingestion, validation, enrichment, journal entry creation, and MS SQL persistence using Dapper DAL, structured logging, and traceable service execution.
- Strengthened reliability across distributed services with idempotency, retry-safe processing, structured error handling, OAuth/JWT auth patterns, Azure Monitor/Logs, and Azure DevOps CI/CD release discipline.
- Built production AI developer tooling: an autonomous PR review agent and **Eton Dev**, a Visual Studio AI companion used by **20+ engineering/product users** for review, debugging, PR, and AI-assisted workflows.
- Recognized by Director of Engineering and Chief Solution Architect for LLM, agentic AI, developer tooling, and platform contributions.

Spurzee Technologies - Full-Stack Developer Intern

Jul 2024 - Jun 2025 | *Trading systems / FinTech*

- Built a real-time stock analytics platform with live candlestick visualization, market data APIs, technical indicators, and automated pattern detection for 15-20 trading patterns.
- Integrated LLM-assisted trade signal generation and automated options workflows, improving data-processing throughput by **25%**.
- Trained and deployed a Random Forest stock-price prediction model; managed model development through cloud deployment on AWS/DigitalOcean.

SELECTED ENGINEERING WORK

PR Review Agent - Production Azure DevOps Code Review Platform

- Built Azure Functions architecture: HTTP webhook acknowledgement in **<1s**, queue-triggered LLM processor, automated PR comments/votes, and long-running review isolation.
- Reviewed **150+ PRs org-wide in 20-30 days** with Jira context, diff analysis, prior-finding extraction, context-aware delta reviews, and LangFuse tracing.
- Implemented `@agent` commands, event normalization, commit-keyed deduplication, confidence downgrades, multi-repo routing, and Azure DevOps thread fallback logic.

Eton Dev - Production AI Development Companion

- Built Visual Studio VSIX/WebView2 tool with AI chat, pre-PR review, bug investigation, auto-fix, commit flow, and Azure DevOps PR lifecycle in one panel.
- Designed multi-provider LLM routing across Claude, Mistral, GPT/Azure OpenAI, and custom backends with repo-aware routing and retry handling.
- Implemented safe auto-fix planner/patcher, atomic writes with backups, MSAL WAM auth, SSO fallback, JWT caching, and Azure DevOps IdentityPicker GUID resolution.

Eton ARC - Active R&D Multi-Agent Code Intelligence Pipeline

- Designed 6-agent Jira-to-code flow: Triage -> grep-first Discovery -> parallel Specialist Council -> Moderator -> Opus principal review -> Execute.
- Built dual-layer Qdrant/LlamaIndex retrieval across source chunks and service profiles for 11 services; exact identifier search is prioritized before semantic retrieval.
- Produces execution plans with file diffs, PR descriptions, build order, xUnit stubs, AC coverage, regression risks, and GO / CONDITIONAL-GO / NO-GO gates.

EDUCATION

B.E. Computer Science & Engineering

PES Institute of Technology and Management, Shivamogga
2021 - 2025 | GPA: 8.62 / 10

RECOGNITION

- Leadership recognition for AI platform/tooling contributions.
- IJIRT research publication on quantum computing and insurance risk.
- Alumni mentor for agentic AI, RAG, and developer tooling.
